Conclusions

- 4. The Committee endorses the view that dumping rubbish is fly-tipping, antisocial behaviour and should be challenged.
- 8 Findings: Changing the Culture

8 **MARKET AND THE PROPERTY OF THE PROPERTY OF**

Conclusions

5. As budgets are reduced, it is no longer enough for officers or Councillors to just react to rubbish left in the streets and other enviro

should be made explicit. Presentations could be made to all ward committees on options for taking local action. Help should also be made available to individuals who undertake work to keep their area clean.

- 7. Education, information and enforcement are key tools in bringing about the culture change referred to above. Encouraging change through good information and education are the first steps, with enforcement being a last resort.
- 8. Communication and community engagement is an issue across the City Council and any changes have to be part of a wider change. However, there needs to be ways to incentivise and communicate better with regard to waste disposal.

9 **9**

... the local and sustainable management of biodegradable material, where waste is transformed into a local resource, generating local environmental, social and economic benefits. It is a not-for-profit activity carried out by community groups and social enterprises to collect and compost garden or kitchen waste. The compost can be sold, donated and used to grow local fruit, vegetables and flowers. Projects can range from a group of neighbours running a small site to a social enterprise delivering a kerbside collection.⁵
